Marks Obtained : 10

Section 1 : Coding

1. Problem Statement

In a messaging application, users maintain a contact list with names and corresponding phone numbers. Develop a program to manage this contact list using a dictionary implemented with hashing.

The program allows users to add contacts, delete contacts, and check if a specific contact exists. Additionally, it provides an option to print the contact list in the order of insertion.

Input Format

The first line consists of an integer n , representing the number of contact pairs to be inserted.

Each of the next n lines consists of two strings separated by a space: the name of the contact (key) and the corresponding phone number (value).

The last line contains a string *k*, representing the contact to be checked or removed.

Output Format

If the given contact exists in the dictionary:

1. The first line prints "The given key is removed!" after removing it.
2. The next *n* - 1 lines print the updated contact list in the format: "Key: *X*; Value: *Y*" where *X* represents the contact's name and *Y* represents the phone number.

If the given contact does not exist in the dictionary:

1. The first line prints "The given key is not found!".
2. The next *n* lines print the original contact list in the format: "Key: *X*; Value: *Y*" where *X* represents the contact's name and *Y* represents the phone number.

Refer to the sample outputs for the formatting specifications.

Sample Test Case

Input: 3

Alice 1234567890

Bob 9876543210

Charlie 4567890123

Bob

Output: The given key is removed!

Key: Alice; Value: 1234567890

Key: Charlie; Value: 4567890123

Answer

```
// You are using GCC
```

```
#include <stdio.h>
```

```
#include <stdlib.h>
```

```
#include <string.h>
```

```
#define MAX_CONTACTS 50
```

```
#define MAX_LEN 20
```

```
// Define contact structure
```

```
typedef struct {  
    char name[MAX_LEN];  
    char phone[MAX_LEN];  
} Contact;
```

```
// Function to find contact index by name
```

```
int find_contact(Contact contacts[], int n, const char *key) {  
    for (int i = 0; i < n; i++) {  
        if (strcmp(contacts[i].name, key) == 0)  
            return i;  
    }  
    return -1;  
}
```

```
int main() {  
    int n;  
    scanf("%d", &n);
```

```
    Contact contacts[MAX_CONTACTS];  
    for (int i = 0; i < n; i++) {  
        scanf("%s %s", contacts[i].name, contacts[i].phone);  
    }
```

```
    char key[MAX_LEN];  
    scanf("%s", key);
```

```
    int index = find_contact(contacts, n, key);
```

```
    if (index != -1) {  
        printf("The given key is removed!\n");  
        // Remove contact by shifting the rest  
        for (int i = index; i < n - 1; i++) {  
            contacts[i] = contacts[i + 1];  
        }  
        n--; // reduce count
```

```
        for (int i = 0; i < n; i++) {  
            printf("Key: %s; Value: %s\n", contacts[i].name, contacts[i].phone);  
        }
```

```
    } else {  
        printf("The given key is not found!\n");  
        for (int i = 0; i < n; i++) {  
            printf("Key: %s; Value: %s\n", contacts[i].name, contacts[i].phone);  
        }  
    }  
  
    return 0;  
}
```

Status : Correct
