Name: Sneha Raju R

Email: 240701519@rajalakshmi.edu.in

Roll no: 240701519 Phone: 7550004064

Branch: REC

Department: I CSE FE

Batch: 2028

Degree: B.E - CSE

### NeoColab\_REC\_CS23231\_DATA STRUCTURES

REC\_DS using C\_Week 2\_COD\_Question 4

Attempt : 1 Total Mark : 10 Marks Obtained : 10

Section 1: Coding

#### 1. Problem Statement

Ravi is developing a student registration system for a college. To efficiently store and manage the student IDs, he decides to implement a doubly linked list where each node represents a student's ID.

In this system, each student's ID is stored sequentially, and the system needs to display all registered student IDs in the order they were entered.

Implement a program that creates a doubly linked list, inserts student IDs, and displays them in the same order.

#### **Input Format**

The first line contains an integer N the number of student IDs.

The second line contains N space-separated integers representing the student IDs.

## Output Format

The output should display the single line containing N space-separated integers representing the student IDs stored in the doubly linked list.

Refer to the sample output for formatting specifications.

#### Sample Test Case

```
Input: 5
   10 20 30 40 50
Output: 10 20 30 40 50
   Answer
   #include <stdio.h>
   #include <stdlib.h>
   struct node {
      int data;
      struct node* next;
      struct node* prev;
   };
   void insertatend(struct node** head, struct node** tail, int data) {
      struct node* newn = (struct node*)malloc(sizeof(struct node));
      newn->data = data;
      newn->next = NULL;
      newn->prev = *tail;
      if (*tail == NULL) {
        *head = newn;
        *tail = newn;
      } else {
        (*tail)->next = newn;
        *tail = newn;
```

```
240701519
struct node* head;
while (temp) {
    void display(struct node* head) {
         printf("%d ", temp->data);
         temp = temp->next;
      }
    }
    int main() {
      struct node* head = NULL;
      struct node* tail = NULL;
      int n;
      scanf("%d", &n);
    for (int i = 0; i < n; i++) {
   int data:
         scanf("%d", &data);
         insertatend(&head, &tail, data);
      display(head);
      return 0;
    }
    Status: Correct
                                                                           Marks: 10/10
```
